ENERGY POLICY

Vergo Energy aims to implement and develop a proactive energy management system in all its activities with the aim of contributing to a sustainable future.

In order to increase our energy performance;

To use energy and natural resources efficiently in all our activities,

To meet all legal requirements and other obligations regarding energy efficiency, energy use and energy consumption,

To use technologies that prioritize energy efficiency in the design of our processes,

To take energy efficiency into account in the supply of services and products that affect energy performance and to support purchases in this direction,

Saving energy and reducing natural resource consumption by making efficiency-increasing improvements in existing processes and systems,

Developing and implementing energy efficiency projects to mitigate the effects of climate change and reduce greenhouse gas emissions,

To establish energy targets that are in line with our energy policy and serve the purpose of our organization, and to provide the information and resources required to achieve these targets,

To ensure adequate resources (information, expertise and economic resources) to achieve energy-related goals and objectives and to continuously review them,

We are committed to continuously improving our energy management system and enhancing energy performance.

Nevzat Taskin

Chairman of the Board of Directors
